

W07 Introduction

To-Do Date: Jun 3 at 10:59pm

Overview

- **Tasks:** This week we will finally get our rafting home page to look just like the wireframe you were given back in week 2! You will need to apply all that you have learned thus far to do this. Make sure to read the instructions carefully and don't skip anything!
- **Purpose:** Apply the CSS & HTML skills that you've acquired so far in this course.

Objectives

- Apply your CSS layout learning by completing the Dry Oar home page
- Become familiar with the expectations for the personal site plan and begin creating yours
- We will also continue work on our personal site by beginning a site plan and choosing colors and fonts for our site.

Notes

You will notice that the personal site assignments will have a **Complete/Incomplete** grading system, unlike the rafting assignments. This grading is in place because of the importance of completing one assignment before going onto another. An 'Incomplete' may be given even if you only missed a part of an assignment, just make the corrections and resubmit your assignment, so you can get the 'Complete' grade.
